

Atlas Sync — Release 4.2.0

March 3, 2026

New features

Added incremental sync mode for workspaces over 50GB.

New audit log export to CSV from Settings > Compliance.

Fixes

FIX-1042: Resolved a memory leak in the background indexer when ingesting large batches of PDF attachments.

FIX-1055: Fixed an issue where SSO sessions expired 10 minutes early for accounts in UTC-10 and UTC-11 timezones.

JIRA-2291: Corrected search relevance ranking so exact version matches (e.g. "4.1.0") now outrank partial matches.

Known issues

Large file uploads (>2GB) may briefly show an incorrect progress percentage; the upload itself completes correctly.
